

Example 1:

```

class Base {
    public Class Base() {
        //Base constructor
    }
}

class Derive {
    public Class Derive() {
        //Derive constructor
    }
}

```

Example 2:

```

class Base {
    public Class Base() {
        //Base constructor
    }
}

class Derive {
    public Class Derive() {
        //Derive constructor
    }
    public void run() {
        //Derive run method
    }
}

```

Example 3:

```

class Base {
    public Class Base() {
        //Base constructor
    }
}

class Derive {
    public Class Derive() {
        //Derive constructor
    }
    public void run() {
        //Derive run method
    }
}

```
